## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Cataldo (4,050,420).

Cataldo teaches a compression process 1-2" by changing the volume of the cylinder of the engine, adding heat while maintaining a constant pressure 2"-3" second heat addition while maintaining a constant limiting temperature 3-4 an adiabatic expansion process 4-5 and heat removal process with a constant volume 5-1. Figure 4 obviously shows the compression process, heat addition process, adiabatic expansion process and heat removal process combine to form an over expanded limited temperature cycle.
